- Hello there! I am a senior web developer with 19 years of experience, at present sharing my time between front-end development, attending music festivals, watching basketball, and reading (mostly comic books). I love getting my hands dirty with new tools, libraries, or frameworks. That dopamine rush you get every time you see something new come out of your hands is probably the life force of every front-end developer. I'm currently interested in front-end development with React positions/projects.

## Experience

### NextUp

JULY 2024 - PRESENT

#### Web Developer

- Adapt an accounting web app created for the French market to the Romanian market.

### Enable

OCTOBER 2022 - OCTOBER

2023

#### React Frontend Developer

- I was part of the frontend team, for a client called Perigord, responsible for developing one of their products, a no code/low code platform called GLAMS Intercharge.

### BlueAir, Bucharest

OCTOBER 2021 - JULY 2022

#### Senior Web Developer

- - I contributed to the company's first mobile application development and release. The technologies used were React.js and Ionic framework, with an integration with an API provided by Navitaire for managing bookings.
- - Later I was part of the payments team, where one of my responsibilities was the integration of new payment processors. As part of my other responsibilities, I developed a new admin application for the payments domain using React.js. For both these projects, the backend consisted of ASP.NET Core Web APIs.

### 888Sparkware, Bucharest

AUGUST 2014 - OCTOBER

2021

#### Senior Web Developer

- Part of the team responsible for creating applications for the affiliates program at 888. - The main app that I worked on was the backend admin application, firstly developed with ASP.NET Webforms and which we later began rewriting with Angular for FE and ASP.NET Core Web API for BE. - The other essential app we were responsible for was the portal for our end users, written with ASP.NET MVC.
- Later I contributed to the Customer Relations domain, where I was responsible for developing a chat widget integrated with Oracle ODA. During this time, I also

started the development of a new admin application. The technology stack for these apps was React.js for FE and ASP.NET Core WEB API for the BE.

---
